Re: eTrack Project Tracking Software

As Executive Director of Engineers Australia Sydney Division, I recommend you take a look at the all-in-one eTrack software tool to help you bill *everything, accurately*; manage resources; grow a knowledge base of QA checklists and templates; and much more. eTrack could benefit you.

"Fundamental to all Building Professionals is the allocation of work to staff, the programming of that work to be completed in a timely manner with the correct allocation of resources, the overlay of checklists for quality assurance and the capturing of hours and costs for work completed. eTrack has allowed us to draw these disparate and often neglected duties into one refined management system and advance them to new levels. It is self policing and the user friendly nature means staff enjoy implementing the system." [(Robert) Buckerfield Architects - MD]

eTrack is developed and supported by a local Australian company, eTrack Products Pty Ltd. Their product is used by many building professionals throughout Australia, many of whom purchased eTrack after an extensive review of alternatives. The company seeks to build strong relationships with their customers, providing regular upgrades and developing customisations and reports on request. Grant Maggs quotes...

"Our main use of eTrack is in the staff time sheets. The figures extracted from these time sheets were extremely efficient in creating reports, on all project stages which then enabled us to prepare accurate design estimates for future jobs, based on past similar projects. The support staff are always extremely helpful and ready to modify the program to suit our company as the need arose". [Grant Maggs Architects]

eTrack comes pre-configured ready to use but can also be tailored to any environment. You only pay for the features you use but have the confidence of knowing you can scale to a fully featured, enterprise wide system, such as used by companies like ING and GIO with over 300 hundred users.

eTrack Products Pty Ltd is confident that you can achieve immediate benefits from using eTrack and are offering to minimise your risk by offering a 30 day, 100% money back guarantee [valid to end 2004].

I encourage you to take a look at what eTrack has to offer by contacting them directly and making your own assessment of their product.

Best Regards

Richard Phillips
